***Allowable Subject Matter***

3. Claims 1-4, 25, 26, 33, 37-39 (to be re-numbered as 1-10) are allowed.

4. The following is an examiner's statement of reasons for allowance:

Regarding claims 1-4, 25, 26, 37-39, the most relevant prior art of record, Jones et al reference, teaches first learning means for deriving a temporary self-organizing map in which classes are associated with respective vector points of reference feature vectors by learning first learning data including a plurality of first sample feature vectors for each of which a corresponding class is known; and second learning means for modifying the temporary self-organizing map and deriving a final self-organizing map by learning second learning data including a plurality of second sample feature vectors for each of which a corresponding class is known (see Non-Final Rejection dated 8/19/08).

Applicant's claimed invention distinguishes over the Jones et al reference by wherein the second learning means includes: second vector specifying means for reading one of the second sample feature vectors out of the second learning data and specifying a second learning winner vector on the temporary self-organizing map which has the highest similarity to said one of the second sample feature vectors; modification means for comparing a class associated with a vector point of the second learning winner vector to a corresponding class of said one of the second sample feature vectors indicated by the second learning data and, when the class associated with the vector point of the second learning winner vector is not identical to the corresponding class indicated by the second learning data, modifying the second learning winner vector and a plurality of reference feature vectors distributed in a second learning vicinity of the second learning winner vector on the temporary self-organizing map so as to reduce the similarity thereof to said one of the second sample feature vectors; and means for deriving the final self-organizing map by operating each of the second vector specifying means and the

modification means once or repeatedly more than once for each of said plurality of second sample feature vectors.

Regarding claim 33, the most relevant prior art of record, Jones et al reference, teaches extraction means for extracting one or a plurality of feature vectors from the target image or the image region; winner vector specifying means for specifying a winner vector on the self-organizing map which has the highest similarity to the feature vector for each of said one or plurality of feature vectors; meaning determining means for determining the meaning of the target image or the image region based on meanings associated with respective vector points of the winner vectors (see Non-Final Rejection dated 8/19/08).

Applicant's claimed invention distinguishes over the Jones et al reference by input means for receiving designation of a target image or an image region of which a correct meaning cannot have been determined by the meaning determining means, and input of the correct meaning of said target image or said image region; and modification means for modifying the self-organizing map by additionally learning the target image or the image region which is designated through the input means, wherein, for each of one or a plurality of feature vectors extracted from the designated target image or image region, the modification means modifies a winner vector having the highest similarity to the feature vector and a plurality of reference feature vectors distributed in a vicinity of the winner vector on the self-organizing map so as to reduce the similarity thereof to said feature vector.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
